

An **X** may be related to **0 or 1** Ys.
 A **Y** may be related to any number (**0 or more**) Xs.

```
CREATE TABLE X (
  id INT PRIMARY KEY,
  y_id INT REFERENCES Y(id)
);
```

```
CREATE TABLE Y (
  id INT PRIMARY KEY
);
```

An **X** may be related to **0 or 1** Ys.
A **Y** may be related to **0 or 1** Xs.

```
CREATE TABLE X (
  id INT PRIMARY KEY,
  y_id INT UNIQUE REFERENCES Y(id)
);
```

```
CREATE TABLE Y (
  id INT PRIMARY KEY
);
```

An **X** must be related to **exactly 1 Y**.
A **Y** may be related to any number (**0 or more**) **Xs**.

```
CREATE TABLE X (
  id INT PRIMARY KEY,
  y_id INT NOT NULL REFERENCES Y(id)
);
```

```
CREATE TABLE Y (
  id INT PRIMARY KEY
);
```

An **X** must be related to **exactly 1 Y**.
A **Y** may be related to **0 or 1 Xs**.

```
CREATE TABLE X (
  id INT PRIMARY KEY,
  y_id INT NOT NULL UNIQUE REFERENCES Y(id)
);
```

```
CREATE TABLE Y (
  id INT PRIMARY KEY
);
```

An **X** may be related to **0 or 1 Ys**.
A **Y** must be related to **1 or more Xs**.

```
CREATE TABLE X (  
  id INT PRIMARY KEY,  
  y_id INT REFERENCES Y(id)  
);
```

```
CREATE TABLE Y (  
  id INT PRIMARY KEY  
);
```

+ application logic

An **X** may be related to **exactly 1 Y**.
A **Y** must be related to **1 or more Xs**.

```
CREATE TABLE X (  
  id INT PRIMARY KEY,  
  y_id INT NOT NULL REFERENCES Y(id)  
);
```

```
CREATE TABLE Y (  
  id INT PRIMARY KEY  
);
```

+ application logic

All **X**s and **Y**s must be matched **1 to 1**

```
CREATE TABLE XY (  
  x_id INT PRIMARY KEY,  
  y_id INT NOT NULL UNIQUE  
);
```

An **X** may be related to any number (**0 or more**) **Y**s.
A **Y** may be related to any number (**0 or more**) **X**s.

```
CREATE TABLE X (
  id INT PRIMARY KEY,
);
```

```
CREATE TABLE Y (
  id INT PRIMARY KEY
);
```

```
CREATE TABLE R (
  id INT PRIMARY KEY,
  x_id INT NOT NULL REFERENCES X(id),
  y_id INT NOT NULL REFERENCES Y(id)
);
```

```
CREATE TABLE X (
  id INT PRIMARY KEY,
  r_id INT REFERENCES R(id)
);
```

```
CREATE TABLE Z (
  id INT PRIMARY KEY,
  r_id INT REFERENCES R(id)
);
```

```
CREATE TABLE Y (
  id INT PRIMARY KEY,
  r_id INT REFERENCES R(id)
);
```

```
CREATE TABLE R (
  id INT PRIMARY KEY,
  x_id INT NOT NULL UNIQUE REFERENCES X(id),
  z_id INT NOT NULL UNIQUE REFERENCES Z(id),
  y_id INT NOT NULL UNIQUE REFERENCES Y(id)
);
```

```
CREATE TABLE X (
  id INT PRIMARY KEY,
  r_id INT REFERENCES R(id)
);
```

```
CREATE TABLE Z (
  id INT PRIMARY KEY,
  r_id INT REFERENCES R(id)
);
```

```
CREATE TABLE Y (
  id INT PRIMARY KEY ,
  r_id INT REFERENCES R(id)
);
```

```
CREATE TABLE R (
  id INT PRIMARY KEY,
  x_id INT UNIQUE REFERENCES X(id),
  z_id INT UNIQUE REFERENCES Z(id),
  y_id INT UNIQUE REFERENCES Y(id)
);
```

```
CREATE TABLE X (
  id INT PRIMARY KEY,
  r_id INT REFERENCES R(id)
);
```

```
CREATE TABLE Z (
  id INT PRIMARY KEY,
  r_id INT REFERENCES R(id)
);
```

```
CREATE TABLE Y (
  id INT PRIMARY KEY ,
  r_id INT REFERENCES R(id)
);
```

```
CREATE TABLE R (
  id INT PRIMARY KEY,
  x_id INT NOT NULL REFERENCES X(id),
  z_id INT NOT NULL REFERENCES Z(id),
  y_id INT NOT NULL UNIQUE REFERENCES Y(id)
);
```

+ application logic

```
CREATE TABLE X (
  id INT PRIMARY KEY,
  r_id INT REFERENCES R(id)
);
```

```
CREATE TABLE Z (
  id INT PRIMARY KEY,
  r_id INT REFERENCES R(id)
);
```

```
CREATE TABLE Y (
  id INT PRIMARY KEY,
  r_id INT REFERENCES R(id)
);
```

```
CREATE TABLE XZ (
  id INT PRIMARY KEY,
  x_id NOT NULL UNIQUE REFERENCES X(id),
  z_id NOT NULL UNIQUE REFERENCES Z(id)
);
```

```
CREATE TABLE R (
  id INT PRIMARY KEY,
  xz_id INT NOT NULL REFERENCES XZ(id),
  y_id INT NOT NULL UNIQUE REFERENCES Y(id)
);
```
